

Jerome proudly announces the delivery of our newest breakthrough — Papoose! Papoose joins the Jerome family of pediatric cervical spine immobilization devices dedicated to setting industry standards.

Helping you take pediatric care one step further, Papoose is a Jerome innovation for your youngest and most challenging patients, newborn (Broselow Gray) infants. Papoose cradles the baby's body, securely and gently immobilizing the head and spine in the proper anatomical airway and spinal alignment. Its occipital shape protects against positional plagiocephaly.

Papoose's unique design allows for continued intimacy between caregiver and child, even permitting convenient diaper changing with minimal disruption in immobilization. It may even be used for temporary immobilization for IV placement.

ORDERING INFORMATION

PAR-100 Papoose w/replacement pads
